1	Claims
4	Clanin

What is claimed is:

3	1. A spa capsule partially enclosing a person's body to provide a simulated
4	environment by stimulating the auditory, olfactory, optic and tactile senses of
5	the body comprising a cabinet having a head end and a foot end, said cabinet
6	having a lid hingedly connected at said foot end, said cabinet and said lid
7	forming an enclosed space, said lid open at said head end, said cabinet having
8	means for selectively producing sounds, odors, visual images and massage in said
9	enclosed space wherein each sense may be stimulated in sequence or
10	simultaneously, said means for massage includes a movable array of fluid nozzles
11	mounted in said enclosed space, said array intermittently connected to a supply
12	of pressurized fluid producing pulses of fluid pressure in said enclosed space,
13	a controller operatively connected to said array and said supply to control
14	movement of said array and fluid flow to said nozzles, wherein said means for
15	massage includes a plastic liner surrounding said fluid nozzles and movable
16	therewith, said plastic liner connected to a drain mechanism extending from said
17	liner to a holding tank, said holding tank connected to said supply of
18	pressurized fluid for recycling of said fluid, and a heat exchange means in fluid
19	communication with said holding tank, wherein temperature of said fluid is controllably
20	adjusted.

21

22

2. The spa capsule of claim 1 wherein longitudinal rods are connected to said

lid extending from said head end to said foot end, said movable array of fluid nozzles are suspended from said rods for longitudinal movement in said enclosed space, said movable array including a plate for maintaining the shape of said

3. The spa capsule of claim 1 wherein said fluid is a liquid.

plastic liner, said plate attached at the periphery to said plastic liner.

4. In a spa capsule partially enclosing a person's body to provide a simulated environment by stimulating the optic senses containing:

an elongated cabinet having a foot and a head end, said cabinet having an elongated lid, said cabinet and lid forming an enclosed space, said lid open at said head end, said cabinet including means for stimulating the auditory and optic senses by conveying certain sounds and certain visual images into said enclosed space, a bed located in said cabinet, said bed having an aperture therethrough to accommodate the face of a person in the prone position, and an optical system below said bed to put said visual images in view of said prone person;

said cabinet further includes means for stimulating tactile senses by modifying heat and light in said enclosed space, said means for stimulating said tactile senses including a hydro-massage mechanism that applies pressure to specific points on the body, said pressure being momentary and repetitive, the improvement comprising;

heat exchange means for controllably adjusting temperature of said hydro-massage mechanism.
